Program Summary

OVERVIEW:

This one-hour program introduces a new 'Best Practice' in office lighting design. Learn how to use this breakthrough approach in sustainable office lighting design and bring dramatic energy savings, cost savings, and a balanced lighting aesthetic to your next design project. The program is a result of research conducted for the California Energy Commission (CEC) and Public Interest Energy Research (PIER) program.

LEARNING OBJECTIVES:

Study the findings of a recent research project to:

- Identify immediate ways to increase energy efficiency and reduce construction costs.
- Develop proper objectives for lighting offices including:
 - Light levels & uniformity goals
 - Energy consumption
 - Budgets
- Choose new luminaires in new ways to light the task, vertical surfaces, and ambient surroundings, to accomplish these objectives.
- Specify sustainable office projects by focusing on lighting.

FACILITATOR QUALIFICATIONS:

All Finelite facilitators have been trained on guidelines and presentation skills. In addition, all presenters receive continuous training on the science of lighting, best practices, and all applicable energy codes related to the lighting design process.
