

Problem Solving

CHALLENGE IN COMMERCIAL SPACES

- Poor sound quality
- High noise levels
- Reverberation issues
- Discomfort for occupants

A SOUND IDEA

Today's design integrate surface elements like unfinished ceilings, exposed concrete floors, and large windows while also eliminating sound-absorbing materials. This results in acoustical challenges that have a direct impact on occupant well-being and productivity.

ACOUSTIC CONCEPTS TO CONSIDER

Speed of Sound The distance traveled per unit time by a sound wave as it propagates through a medium.

Absorption

The conversion of sound energy into heat due to the properties of a material, thereby reducing the amount of reflected energy in a space.

Reverberation Time A quantification of reverberation, reverberation time of a room or space is defined as the time it takes for sound to decay by 60 dB after the source of the sound has stopped.

NRC

Noise Reduction Coefficient (NRC)

A single number rating derived from measured values of sound absorption coefficients in accordance with ASTM Test Method C423.

DISTRACTION

52% of workers report they are interrupted by noise distractions more than 5 times in a working day.

The "Noise and Wellbeing at Work 2019" survey conducted by The Remark Group, supported by Dr. Nigel Oseland

Luminaire Features

OUR LUMINAIRES

Unparalleled performance and uniform illumination from a clean linear form factor. Our lines of light are designed for ease of installation and feature integral drivers, simple plug-together wiring, and screw-free access.

THE FINELITE DIFFERENCE

90% of initial light output at 100,000 hours

Signal White shown

Acoustic Features

OUR ACOUSTICS

We offer elegant and affordable approach to improve the sound quality of open space environments. Our acoustic products can be specified as a combination of high-performing, sound-absorbing LED pendant luminaires, in addition to, noise-reducing unlit baffles. Standard lengths of 4' and 8' combine for continuous runs.

Acoustic products contribute towards WELL Sound Absorption SO4 requirements.
