Product Transparency for the Future of Healthy Buildings

- AIA HSW Approved - 1 LU, HSW
- NCQLP - 1 LEU (Self-reporting)

Provider:

Finelite, Inc.

Method of Delivery:

The facilitator will use a powerpoint presentation to review the information.

Audiovisual Required:

Facilitator will provide audiovisual equipment. Access to an electrical outlet will be required.

Cost to Participants:

Free

Point of Contact:

Renato Quiocho Jr.

Web Designer - Internal/External Communication

Program Summary

PROGRAM OVERVIEW:

Product transparency and sustainable design is a green building initiative gaining momentum with specifiers and building owner requesting materials free of harmful chemical toxins in an effort to create healthier, high performing environments. In this seminar we will discuss why project teams should be seeking out product transparency documentation to achieve their material ingredient transparency and optimization goals. We will dive into recent green building standards with an emphasis on the International Living Future Institute's Living Building Challenge, Red List, and Declare 2.0 program. Lastly, explain how project teams can use this information to make more informed decisions and achieve various credits, features, and imperatives within the LEED, WELL and Living Building Challenge.

LEARNING OBJECTIVES:

Attendees will:

- Understand the importance of product transparency and why project teams should seek out products with documentation available
- Learn about the International Living Future Institute's Living Building Challenge and Red List
- Understand the Declare 2.0 program and examine why product transparency is vital
- Examine how the Declare 2.0 program relates and contributes to LEED, WELL, and Living Building Challenge green building standards

FACILITATOR QUALIFICATIONS:

All Finelite facilitators have been trained on guidelines and presentation skills. In addition, all presenters receive continuous training on the science of lighting, best practices, and all applicable energy codes related to the lighting design process.
